

Viraj Pitale

"Self Taught Data Scientist"

| virajpitale.github.io | linkedin.com/in/viraj-pitale/

SKILLS

Programming Languages: Python, SQL, Java

Python Libraries & Tools: Numpy, Pandas, Matplotlib, Seaborn, scikit-learn, FastAPI, Flask

Machine Learning: Supervised and Unsupervised Learning, Regression, Classification, Decision Trees, Random Forest, XGBoost, K-means, PCA

Deep Learning: Neural Networks, CNN, RNN, LSTM

Data Analysis & Visualization: Exploratory Data Analysis (EDA), Data Cleaning, Data Manipulation, Data Normalization, Feature Engineering

Statistics & Mathematics: Descriptive and Inferential Statistics, Probability, Hypothesis Testing, Correlation, Central Limit Theorem

Database Management: Relational Databases, Basic and Advanced SQL Queries, Joins, CTE, Subqueries, Window Functions

Web Development: HTML, CSS, JavaScript, Flask, FastAPI

Deployment: AWS, Azure

Tools & Platforms: Excel, ChatGPT, PowerPoint, JIRA, Notion, GitHub

EDUCATION

Indian Institute Of Technology (IIT) Madras

Bs In Data Science And Applications, Expected Graduation 2027

PROJECTS

Mumbai House Price Prediction

- **Tools & Technologies:** Python, Pandas, scikit-learn, FastAPI, HTML, CSS, JavaScript
- **Situation:** Tasked with predicting house prices in Mumbai using a dataset.
- **Task:** Cleaned data, engineered features, and developed a machine learning model to predict house prices.
- **Action:** Explored various machine learning models, including Decision Tree Regressor, fine-tuning parameters to achieve optimal accuracy. Implemented FastAPI for backend deployment and used HTML, CSS, and JavaScript for frontend development.
- **Result:** Achieved an accuracy of 85%-90% on test data, demonstrating a significant understanding of predictive analytics and web deployment. The project provided valuable insights for real estate firms to enhance their pricing strategies.
- **Explore the Project:** Check out the [LinkedIn Post](#) for an overview and [view the full code](#) on GitHub.

Loan Approval Prediction Model

- **Situation:** Faced with the challenge of predicting loan approvals accurately, which is crucial for financial institutions to streamline their lending processes and minimize risk.
- **Task:** Develop a machine learning model to predict whether a loan application will be approved or rejected based on various applicant features.
- **Action:** Cleaned data, engineered features, trained models achieving 98%-99% accuracy with Random Forest and Gradient Boosting, deployed with Flask, and created a user-friendly website interface.
- **Result:** Successfully developed a prediction model that provides accurate loan approval outcomes, enhancing decision-making processes for lenders and improving user experience through a seamless web interface.
- **Explore the Project:** Check out the [LinkedIn Post](#) for an overview and [view the full code](#) on GitHub.

SQL Challenge at Codebasics

- **Tools & Technologies:** SQL, Excel, PowerPoint
- **Situation:** Participated in a hypothetical scenario at Atliq Hardwares, a leading computer hardware company in India.
- **Task:** Transform raw data into actionable business strategies using SQL queries.
- **Action:** Employed SQL for data extraction and manipulation, used Excel for data cleaning and visualizations, and PowerPoint for presenting findings.
- **Result:** Developed a comprehensive business strategy that showcased the power of SQL analytics in driving informed decisions. The project deepened my understanding of market dynamics and data-driven strategic planning.
- **Explore the Project:** Check out the [LinkedIn Post](#) for an overview and [view the full code](#) on GitHub.

Grocery Purchase Patterns Analysis

- **Tools & Technologies:** Python, Pandas, Matplotlib, Seaborn
- **Situation:** Conducted an exploratory data analysis on a grocery purchase dataset from Kaggle.
- **Task:** Analyzed purchasing trends to provide actionable insights for the grocery retail sector.
- **Action:** Used Pandas for data cleaning and manipulation, and Matplotlib and Seaborn for data visualization. Analyzed seasonal trends, customer segmentation, and top-selling items.
- **Result:** Identified peak purchase periods and top items, enabling targeted promotions and better inventory management. Successfully completed the project within 3-4 hours, demonstrating efficiency in data analysis.
- **Explore the Project:** Check out the [LinkedIn Post](#) for an overview and [view the full code](#) on Kaggle.

Hotel Booking Demand Analysis

- **Tools & Technologies:** Python, Pandas, Matplotlib, Seaborn
- **Situation:** Conducted an exploratory data analysis on the Hotel Booking Demand dataset from Kaggle.
- **Task:** Investigate booking patterns and customer behavior to inform business decisions.
- **Action:** Cleaned and prepared the data, analyzed lead times, cancellation rates, average daily rates, and booking changes using Pandas, Matplotlib, and Seaborn.
- **Result:** Provided insights such as last-minute booking trends and high cancellation rates among transient customers, aiding in strategic planning for hotel management.
- **Explore the Project:** Check out the [LinkedIn Post](#) for an overview and [view the full code](#) on Kaggle.
